NOTINO - Assignment

Your assignment is to create application for displaying few Notino products as seen on example screenshot below.

- Create **native Android** application in **Android Studio** (Android Studio 4.0)

- Use vector drawables (.xml files) that are included in **/drawables** folder

- Get products from simple get request located at url https://my-json-server.typicode.com/michals92/notino-mobile-test/db

- Use prefix url for downloading product images https://i.notino.com/detail_zoom/

- Clicking on heart button changes its **ic_heart_empty** asset to **ic_heart_fill** and back

- Keep in mind that products count can be much higher than provided in example request.

- Use score property in reviewSummary for displaying product rating
